- 1 Introduction**
 - 1 Birds as biodiversity indicators
 - 1 Assessing the status of birds in Europe
 - 1 Why a new assessment?
 - 1 Prioritising conservation action
 - 2 Plans for the future
- 3 Data collection**
 - 3 Pan-European network
 - 3 Data collection
 - 5 Data management
 - 5 Data availability
- 7 Status assessment**
 - 7 Criteria development
 - 10 Data analysis
 - 11 Status assessment
- 13 Data presentation**
- 17 Overview of results**
 - 18 European Red List
 - 18 Winners and losers
 - 20 SPEC distribution and trends
 - 21 Trends between the two assessments
 - 23 Trends by taxonomic order
 - 23 Trends by migration strategy
 - 23 Trends by habitat association
 - 24 Further analyses
- 25 Conclusions and recommendations**
 - 25 Priorities for conservation
 - 26 Priorities for monitoring
 - 26 Priorities for research
 - 26 Towards a renewed biodiversity policy for Europe
- 27 Species accounts**
- 291 Appendices**
 - 291 **Appendix 1.** Conservation status, population estimates and trends of all European species
 - 300 **Appendix 2.** Occurrence of all European species by country
 - 318 **Appendix 3.** Protection status of all European species under international legislation, conventions and agreements
 - 327 **Appendix 4.** Additional attributes of all European species, including key cross-references
 - 336 **Appendix 5.** Important Bird Areas in Europe for species classified as Localised
 - 337 **Appendix 6.** Summary of conservation status assessment in Tucker and Heath (1994)
 - 339 **Appendix 7.** IUCN Red List Categories and Criteria (2001)
- 341 Data references by country**
- 370 Species index**
