

FOURTH EDITION

# Wastewater Engineering

Treatment and Reuse

METCALF & EDDY

INTERNATIONAL EDITION

# Contents

<i>Preface</i>	xxi	<b>2-2</b>	Sampling and Analytical Procedures	29
<i>Acknowledgments</i>	xxv		<i>Sampling</i>	29
<i>Foreword</i>	xxvii		<i>Methods of Analysis</i>	34
			<i>Units of Measurement for Physical and Chemical Parameters</i>	35
<b>1 Wastewater Engineering: An Overview</b>	1		<i>Useful Chemical Relationships</i>	35
<b>1-1</b> Terminology	3	<b>2-3</b>	Physical Characteristics	42
<b>1-2</b> Impact of Regulations on Wastewater Engineering	3		<i>Solids</i>	42
<b>1-3</b> Health and Environmental Concerns in Wastewater Management	7		<i>Particle Size Distribution</i>	48
<b>1-4</b> Wastewater Characteristics	9		<i>Turbidity</i>	51
<i>Improved Analytical Techniques</i>	10		<i>Color</i>	52
<i>Importance of Improved Wastewater Characterization</i>	10		<i>Absorption/Transmittance</i>	52
<b>1-5</b> Wastewater Treatment	10		<i>Temperature</i>	54
<i>Treatment Methods</i>	11		<i>Conductivity</i>	56
<i>Current Status</i>	12		<i>Density, Specific Gravity, and Specific Weight</i>	56
<i>New Directions and Concerns</i>	15	<b>2-4</b>	Inorganic Nonmetallic Constituents	57
<i>Future Trends in Wastewater Treatment</i>	20		<i>pH</i>	57
<b>1-6</b> Wastewater Reclamation and Reuse	20		<i>Chlorides</i>	59
<i>Current Status</i>	21		<i>Alkalinity</i>	59
<i>New Directions and Concerns</i>	21		<i>Nitrogen</i>	60
<i>Future Trends in Technology</i>	21		<i>Phosphorus</i>	63
<b>1-7</b> Biosolids and Residuals Management	22		<i>Sulfur</i>	64
<i>Current Status</i>	22		<i>Gases</i>	64
<i>New Directions and Concerns</i>	23		<i>Odors</i>	70
<i>Future Trends in Biosolids Processing</i>	23	<b>2-5</b>	Metallic Constituents	77
			<i>Importance of Metals</i>	77
<b>2 Constituents in Wastewater</b>	27		<i>Sources of Metals</i>	77
<b>2-1</b> Wastewater Constituents	29		<i>Sampling and Methods of Analysis</i>	77
<i>Constituents Found in Wastewater</i>	29		<i>Typical Effluent Discharge Limits for Metals</i>	78
<i>Constituents of Concern in Wastewater Treatment</i>	29	<b>2-6</b>	Aggregate Organic Constituents	80
			<i>Measurement of Organic Content</i>	81
			<i>Biochemical Oxygen Demand (BOD)</i>	81
			<i>Total and Soluble Chemical Oxygen Demand (COD and SCOD)</i>	93
			<i>Total and Dissolved Organic Carbon (TOC and DTOC)</i>	94
			<i>UV-Absorbing Organic Constituents</i>	95

	<i>Theoretical Oxygen Demand (ThOD)</i>	96		<i>Sources and Rates of Industrial (Nondomestic) Wastewater Flows</i>	16
	<i>Interrelationships between BOD, COD, and TOC</i>	96		<i>Infiltration/Inflow</i>	16
	<i>Oil and Grease</i>	98		<i>Exfiltration from Collection Systems</i>	16
	<i>Surfactants</i>	98		<i>Combined System Flowrates</i>	16
<b>2-7</b>	<b>Individual Organic Compounds</b>	99	<b>3-3</b>	<b>Statistical Analysis of Flowrates, Constituent Concentrations, and Mass Loadings</b>	170
	<i>Priority Pollutants</i>	99		<i>Common Statistical Parameters</i>	170
	<i>Analysis of Individual Organic Compounds</i>	100		<i>Graphical Analysis of Data</i>	171
	<i>Volatile Organic Compounds (VOCs)</i>	100	<b>3-4</b>	<b>Analysis of Wastewater Flowrate Data</b>	178
	<i>Disinfection Byproducts</i>	102		<i>Definition of Terms</i>	178
	<i>Pesticides and Agricultural Chemicals</i>	102		<i>Variations in Wastewater Flowrates</i>	179
	<i>Emerging Organic Compounds</i>	102		<i>Wastewater Flowrate Factors</i>	180
<b>2-8</b>	<b>Biological Characteristics</b>	104	<b>3-5</b>	<b>Analysis of Constituent Mass Loading Data</b>	181
	<i>Microorganisms Found in Surface Waters and Wastewater</i>	104		<i>Wastewater Constituent Concentrations</i>	181
	<i>Pathogenic Organisms</i>	109		<i>Variations in Constituent Concentrations</i>	185
	<i>Use of Indicator Organisms</i>	115		<i>Flow-Weighted Constituent Concentrations</i>	192
	<i>Enumeration and Identification of Bacteria</i>	118		<i>Calculation of Mass Loadings</i>	194
	<i>Enumeration and Identification of Viruses</i>	126		<i>Effect of Mass Loading Variability on Treatment Plant Performance</i>	197
	<i>Polymerase Chain Reaction (PCR)</i>	129	<b>3-6</b>	<b>Selection of Design Flowrates and Mass Loadings</b>	197
	<i>Development of Microorganisms Typing Techniques</i>	130		<i>Design Flowrates</i>	199
	<i>New and Reemerging Microorganisms</i>	130		<i>Design Mass Loadings</i>	205
<b>2-9</b>	<b>Toxicity Tests</b>	130			
	<i>Toxicity Terminology</i>	131			
	<i>Toxicity Testing</i>	133			
	<i>Analysis of Toxicity Test Results</i>	134	<b>4</b>	<b>Introduction to Process Analysis and Selection</b>	215
	<i>Application of Toxicity Test Results</i>	136			
	<i>Identification of Toxicity Components</i>	137	<b>4-1</b>	<b>Reactors Used for the Treatment of Wastewater</b>	218
<b>3</b>	<b>Analysis and Selection of Wastewater Flowrates and Constituent Loadings</b>	153		<i>Types of Reactors</i>	218
<b>3-1</b>	<b>Components of Wastewater Flows</b>	154		<i>Application of Reactors</i>	220
<b>3-2</b>	<b>Wastewater Sources and Flowrates</b>	154		<i>Hydraulic Characteristics of Reactors</i>	220
	<i>Domestic Wastewater Sources and Flowrates</i>	155	<b>4-2</b>	<b>Mass-Balance Analysis</b>	222
	<i>Strategies for Reducing Interior Water Use and Wastewater Flowrates</i>	158		<i>The Mass-Balance Principle</i>	222
	<i>Water Use in Developing Countries</i>	162		<i>Preparation of Mass Balances</i>	224
				<i>Application of the Mass-Balance Analysis</i>	224
				<i>Steady-State Simplification</i>	225
			<b>4-3</b>	<b>Modeling Ideal Flow in Reactors</b>	226
				<i>Ideal Flow in Complete-Mix Reactor</i>	226
				<i>Ideal Flow in Plug-Flow Reactor</i>	227

<b>4-4</b>	Analysis of Nonideal Flow in Reactors Using Tracers	229		<i>Gas-Liquid Mass Transfer</i>	284
	<i>Factors Leading to Nonideal Flow in Reactors</i>	229		<i>Liquid-Solid Mass Transfer</i>	293
	<i>Need for Tracer Analysis</i>	231	<b>4-9</b>	Introduction to Process Selection	297
	<i>Types of Tracers</i>	231		<i>Important Factors in Process Selection</i>	297
	<i>Conduct of Tracer Tests</i>	231		<i>Process Selection Based on Reaction Kinetics</i>	299
	<i>Analysis of Tracer Response Curves</i>	233		<i>Process Selection Based on Mass Transfer</i>	300
	<i>Practical Interpretation of Tracer Measurements</i>	242		<i>Process Design Based on Loading Criteria</i>	301
<b>4-5</b>	Modeling Nonideal Flow in Reactors	245		<i>Bench Tests and Pilot-Plant Studies</i>	301
	<i>The Distinction between Molecular Diffusion, Turbulent Diffusion, and Dispersion</i>	245		<i>Reliability Considerations in Process Selection</i>	301
	<i>Plug-Flow Reactor with Axial Dispersion</i>	246	<b>5</b>	<b>Physical Unit Operations</b>	311
	<i>Complete-Mix Reactors in Series</i>	252	<b>5-1</b>	Screening	315
<b>4-6</b>	Reactions, Reaction Rates, and Reaction Rate Coefficients	257		<i>Classification of Screens</i>	315
	<i>Types of Reactions</i>	257		<i>Coarse Screens (Bar Racks)</i>	316
	<i>Rate of Reaction</i>	258		<i>Fine Screens</i>	322
	<i>Reaction Order</i>	259		<i>Microscreens</i>	326
	<i>Types of Rate Expressions</i>	260		<i>Screenings Characteristics and Quantities</i>	327
	<i>Rate Expressions Used in Environmental Modeling</i>	261	<b>5-2</b>	Coarse Solids Reduction	330
	<i>Effects of Temperature on Reaction Rate Coefficients</i>	261		<i>Comminutors</i>	331
	<i>Analysis of Reaction Rate Coefficients</i>	264		<i>Macerators</i>	332
<b>4-7</b>	Modeling Treatment Process Kinetics	269		<i>Grinders</i>	333
	<i>Batch Reactor with Reaction</i>	269		<i>Design Considerations</i>	333
	<i>Complete-Mix Reactor with Reaction</i>	270	<b>5-3</b>	Flow Equalization	333
	<i>Complete-Mix Reactors in Series with Reaction</i>	271		<i>Description/Application</i>	333
	<i>Ideal Plug-Flow Reactor with Reaction</i>	274		<i>Design Considerations</i>	335
	<i>Comparison of Complete-Mix and Plug-Flow Reactors with Reaction</i>	275	<b>5-4</b>	Mixing and Flocculation	344
	<i>Ideal Plug-Flow Reactor with Retarded Reaction</i>	277		<i>Continuous Rapid Mixing in Wastewater Treatment</i>	345
	<i>Plug-Flow Reactor with Axial Dispersion and Reaction</i>	279		<i>Continuous Mixing in Wastewater Treatment</i>	345
	<i>Other Reactor Flow Regimes and Reactor Combinations</i>	281		<i>Energy Dissipation in Mixing and Flocculation</i>	347
<b>4-8</b>	Treatment Processes Involving Mass Transfer	283		<i>Timescale in Mixing</i>	350
	<i>Basic Principle of Mass Transfer</i>	283		<i>Types of Mixers Used for Rapid Mixing in Wastewater Treatment</i>	350
				<i>Types of Mixers Used for Flocculation in Wastewater Treatment</i>	355
				<i>Types of Mixers Used for Continuous Mixing in Wastewater Treatment</i>	359

	<i>New Developments in Mixing Technology</i>	361		<i>Mechanical Aerators</i>	443
<b>5-5</b>	<i>Gravity Separation Theory</i>	361		<i>Energy Requirement for Mixing in Aeration Systems</i>	448
	<i>Description</i>	362		<i>Generation and Dissolution of High-Purity Oxygen</i>	448
	<i>Particle Settling Theory</i>	363		<i>Postaeration</i>	452
	<i>Discrete Particle Settling</i>	367	<b>5-13</b>	<i>Removal of Volatile Organic Compounds (VOCs) by Aeration</i>	456
	<i>Flocculent Particle Settling</i>	372		<i>Emission of VOCs</i>	456
	<i>Inclined Plate and Tube Settling</i>	374		<i>Mass Transfer Rates for VOCs</i>	457
	<i>Hindered (Zone) Settling</i>	378		<i>Mass Transfer of VOCs from Surface and Diffused-Air Aeration Processes</i>	459
	<i>Compression Settling</i>	383		<i>Control Strategies for VOCs</i>	463
	<i>Gravity Separation in an Accelerated Flow Field</i>	383	<b>6</b>	<b>Chemical Unit Processes</b>	475
<b>5-6</b>	<i>Grit Removal</i>	384			
	<i>Types of Grit Chambers</i>	385	<b>6-1</b>	<i>Role of Chemical Unit Processes in Wastewater Treatment</i>	476
	<i>Horizontal-Flow Grit Chambers</i>	385		<i>Application of Chemical Unit Processes</i>	477
	<i>Aerated Grit Chambers</i>	386		<i>Considerations in the Use of Chemical Unit Processes</i>	478
	<i>Vortex-Type Grit Chambers</i>	392	<b>6-2</b>	<i>Fundamentals of Chemical Coagulation</i>	478
	<i>Solids (Sludge) Degritting</i>	392		<i>Basic Definitions</i>	479
	<i>Grit Characteristics, Quantities, Processing, and Disposal</i>	394		<i>Nature of Particles in Wastewater</i>	480
<b>5-7</b>	<i>Primary Sedimentation</i>	396		<i>Development and Measurement of Surface Charge</i>	481
	<i>Description</i>	397		<i>Particle-Particle Interactions</i>	482
	<i>Sedimentation Tank Performance</i>	405		<i>Particle Destabilization with Potential-Determining Ions and Electrolytes</i>	483
	<i>Design Considerations</i>	406		<i>Particle Destabilization and Aggregation with Polyelectrolytes</i>	485
	<i>Characteristics and Quantities of Solids (Sludge) and Scum</i>	411		<i>Particle Destabilization and Removal with Hydrolyzed Metal Ions</i>	486
<b>5-8</b>	<i>High-Rate Clarification</i>	411	<b>6-3</b>	<i>Chemical Precipitation for Improved Plant Performance</i>	493
	<i>Enhanced Particle Flocculation</i>	412		<i>Chemical Reactions in Wastewater Precipitation Applications</i>	493
	<i>Analysis of Ballasted Particle Flocculation and Settling</i>	412		<i>Enhanced Removal of Suspended Solids in Primary Sedimentation</i>	497
	<i>Process Application</i>	414		<i>Independent Physical-Chemical Treatment</i>	498
<b>5-9</b>	<i>Large-Scale Swirl and Vortex Separators for Combined Wastewater and Stormwater</i>	417		<i>Estimation of Sludge Quantities from Chemical Precipitation</i>	499
<b>5-10</b>	<i>Flotation</i>	419	<b>6-4</b>	<i>Chemical Precipitation for Phosphorus Removal</i>	500
	<i>Description</i>	419			
	<i>Design Considerations for Dissolved-Air Flotation Systems</i>	422			
<b>5-11</b>	<i>Oxygen Transfer</i>	425			
	<i>Description</i>	425			
	<i>Evaluation of Oxygen Transfer Coefficient</i>	425			
<b>5-12</b>	<i>Aeration Systems</i>	430			
	<i>Types of Aeration Systems</i>	430			
	<i>Diffused-Air Aeration</i>	430			

	<i>Chemistry of Phosphate Precipitation</i>	501	<b>7-2</b>	Composition and Classification of Microorganisms	555
	<i>Strategies for Phosphorus Removal</i>	503		<i>Cell Components</i>	555
	<i>Phosphorus Removal Using Metal Salts and Polymers</i>	505		<i>Cell Composition</i>	557
	<i>Phosphorus Removal Using Lime</i>	507		<i>Environmental Factors</i>	558
	<i>Phosphorus Removal with Effluent Filtration</i>	508		<i>Microorganism Identification and Classification</i>	559
	<i>Comparison of Chemical Phosphorus Removal Processes</i>	508	<b>7-3</b>	Introduction to Microbial Metabolism	563
	<i>Estimation of Sludge Quantities from Phosphorus Precipitation</i>	509		<i>Carbon and Energy Sources for Microbial Growth</i>	563
<b>6-5</b>	Chemical Precipitation for Removal of Heavy Metals and Dissolved Inorganic Substances	514		<i>Nutrient and Growth Factor Requirements</i>	565
	<i>Precipitation Reactions</i>	514	<b>7-4</b>	Bacterial Growth and Energetics	565
	<i>Coprecipitation with Phosphorus</i>	517		<i>Bacterial Reproduction</i>	566
<b>6-6</b>	Chemical Oxidation	517		<i>Bacterial Growth Patterns in a Batch Reactor</i>	566
	<i>Fundamentals of Chemical Oxidation</i>	517		<i>Bacterial Growth and Biomass Yield</i>	567
	<i>Applications</i>	522		<i>Measuring Biomass Growth</i>	567
	<i>Chemical Oxidation of BOD and COD</i>	523		<i>Estimating Biomass Yield and Oxygen Requirements from Stoichiometry</i>	568
	<i>Chemical Oxidation of Ammonia</i>	524		<i>Estimating Biomass Yield from Bioenergetics</i>	571
<b>6-7</b>	Chemical Neutralization, Scale Control, and Stabilization	526		<i>Stoichiometry of Biological Reactions</i>	578
	<i>pH Adjustment</i>	526		<i>Biomass Synthesis Yields for Different Growth Conditions</i>	579
	<i>Analysis of Scaling Potential</i>	528		<i>Observed versus Synthesis Yield</i>	580
	<i>Scaling Control</i>	532	<b>7-5</b>	Microbial Growth Kinetics	580
	<i>Stabilization</i>	532		<i>Microbial Growth Kinetics Terminology</i>	581
<b>6-8</b>	Chemical Storage, Feeding, Piping, and Control Systems	532		<i>Rate of Utilization of Soluble Substrates</i>	581
	<i>Chemical Storage and Handling</i>	533		<i>Other Rate Expressions for the Utilization of Soluble Substrate</i>	582
	<i>Dry Chemical-Feed Systems</i>	533		<i>Rate of Soluble Substrate Production from Biodegradable Particulate Organic Matter</i>	583
	<i>Liquid Chemical-Feed Systems</i>	536		<i>Rate of Biomass Growth with Soluble Substrates</i>	584
	<i>Gas Chemical-Feed Systems</i>	537		<i>Kinetic Coefficients for Substrate Utilization and Biomass Growth</i>	584
	<i>Initial Chemical Mixing</i>	540		<i>Rate of Oxygen Uptake</i>	585
				<i>Effects of Temperature</i>	585
<b>7</b>	<b>Fundamentals of Biological Treatment</b>	545		<i>Total Volatile Suspended Solids and Active Biomass</i>	586
<b>7-1</b>	Overview of Biological Wastewater Treatment	547		<i>Net Biomass Yield and Observed Yield</i>	587
	<i>Objectives of Biological Treatment</i>	548			
	<i>Some Useful Definitions</i>	548			
	<i>Role of Microorganisms in Wastewater Treatment</i>	548			
	<i>Types of Biological Processes for Wastewater Treatment</i>	551			

<b>7-6</b>	<b>Modeling Suspended Growth Treatment Processes</b>	588	<b>7-12</b>	<b>Anaerobic Fermentation and Oxidation</b>	629
	<i>Description of Suspended Growth Treatment Processes</i>	589		<i>Process Description</i>	630
	<i>Biomass Mass Balance</i>	589		<i>Microbiology</i>	631
	<i>Substrate Mass Balance</i>	592		<i>Stoichiometry of Anaerobic Fermentation and Oxidation</i>	633
	<i>Mixed Liquor Solids Concentration and Solids Production</i>	592		<i>Growth Kinetics</i>	634
	<i>The Observed Yield</i>	595		<i>Environmental Factors</i>	635
	<i>Oxygen Requirements</i>	595	<b>7-13</b>	<b>Biological Removal of Toxic and Recalcitrant Organic Compounds</b>	635
	<i>Design and Operating Parameters</i>	598		<i>Development of Biological Treatment Methods</i>	635
	<i>Process Performance and Stability</i>	600		<i>Anaerobic Degradation</i>	637
	<i>Modeling Plug-Flow Reactors</i>	601		<i>Aerobic Biodegradation</i>	638
<b>7-7</b>	<b>Substrate Removal in Attached Growth Treatment Processes</b>	602		<i>Abiotic Losses</i>	638
	<i>Substrate Flux in Biofilms</i>	604		<i>Modeling Biotic and Abiotic Losses</i>	640
	<i>Substrate Mass Balance for Biofilm</i>	605	<b>7-14</b>	<b>Biological Removal of Heavy Metals</b>	644
	<i>Substrate Flux Limitations</i>	606			
<b>7-8</b>	<b>Aerobic Biological Oxidation</b>	607	<b>8</b>	<b>Suspended Growth Biological Treatment Processes</b>	659
	<i>Process Description</i>	608			
	<i>Microbiology</i>	608	<b>8-1</b>	<b>Introduction to the Activated-Sludge Process</b>	661
	<i>Stoichiometry of Aerobic Biological Oxidation</i>	609		<i>Historical Development</i>	661
	<i>Growth Kinetics</i>	610		<i>Description of Basic Process</i>	661
	<i>Environmental Factors</i>	610		<i>Evolution of the Activated-Sludge Process</i>	663
<b>7-9</b>	<b>Biological Nitrification</b>	611		<i>Recent Process Developments</i>	664
	<i>Process Description</i>	611	<b>8-2</b>	<b>Wastewater Characterization</b>	666
	<i>Microbiology</i>	611		<i>Key Wastewater Constituents for Process Design</i>	666
	<i>Stoichiometry of Biological Nitrification</i>	612		<i>Measurement Methods for Wastewater Characterization</i>	671
	<i>Growth Kinetics</i>	614		<i>Recycle Flows and Loadings</i>	676
	<i>Environmental Factors</i>	615	<b>8-3</b>	<b>Fundamentals of Process Analysis and Control</b>	676
<b>7-10</b>	<b>Biological Denitrification</b>	616		<i>Process Design Considerations</i>	677
	<i>Process Description</i>	616		<i>Process Control</i>	689
	<i>Microbiology</i>	618		<i>Operational Problems</i>	694
	<i>Stoichiometry of Biological Denitrification</i>	619		<i>Activated-Sludge Selector Processes</i>	700
	<i>Growth Kinetics</i>	621	<b>8-4</b>	<b>Processes for BOD Removal and Nitrification</b>	703
	<i>Environmental Factors</i>	623		<i>Process Design Considerations</i>	704
<b>7-11</b>	<b>Biological Phosphorus Removal</b>	623		<i>Complete-Mix Activated-Sludge Process</i>	705
	<i>Process Description</i>	624		<i>Sequencing Batch Reactor Process</i>	720
	<i>Microbiology</i>	625		<i>Staged Activated-Sludge Process</i>	734
	<i>Stoichiometry of Biological Phosphorus Removal</i>	627			
	<i>Growth Kinetics</i>	629			
	<i>Environmental Factors</i>	629			

	<i>Alternative Processes for BOD Removal and Nitrification</i>	738		<i>Solids Separation</i>	820
	<i>Process Design Parameters</i>	740		<i>Design of Solids Separation Facilities</i>	833
	<i>Process Selection Considerations</i>	740	<b>8-8</b>	<i>Suspended Growth Aerated Lagoons</i>	840
<b>8-5</b>	<b>Processes for Biological Nitrogen Removal</b>	749		<i>Types of Suspended Growth Aerated Lagoons</i>	841
	<i>Overview of Biological Nitrogen-Removal Processes</i>	750		<i>Process Design Considerations for Flow-Through Lagoons</i>	843
	<i>Single-Sludge Biological Nitrogen-Removal Processes</i>	750		<i>Dual-Powered Flow-Through Lagoon System</i>	853
	<i>Process Design Considerations</i>	753	<b>8-9</b>	<b>Biological Treatment with Membrane Separation</b>	854
	<i>Anoxic/Aerobic Process Design</i>	761		<i>Overview of Membrane Biological Reactors</i>	854
	<i>Step-Feed Anoxic/Aerobic Process Design</i>	765		<i>Process Description</i>	855
	<i>Intermittent Aeration Process Design</i>	776		<i>Membrane Fouling Control</i>	857
	<i>Postanoxic Endogenous Denitrification</i>	780		<i>Process Capabilities</i>	858
	<i>Sequencing Batch Reactor Process Analysis</i>	781	<b>8-10</b>	<b>Simulation Design Models</b>	859
	<i>Postanoxic Denitrification with an External Carbon Source</i>	784		<i>Model Matrix Format, Components, and Reactions</i>	860
	<i>Nitrogen Removal in Anaerobic Digestion Recycle Streams</i>	788		<i>Model Applications</i>	861
	<i>Alternative Process Configurations for Biological Nitrogen Removal</i>	789	<b>9</b>	<b>Attached Growth and Combined Biological Treatment Processes</b>	887
	<i>Process Design Parameters</i>	789			
	<i>Process Selection Considerations</i>	789	<b>9-1</b>	<b>Background</b>	888
<b>8-6</b>	<b>Processes for Biological Phosphorus Removal</b>	799		<i>Evolution of Attached Growth Processes</i>	888
	<i>Biological Phosphorus-Removal Processes</i>	799		<i>Mass Transfer Limitations</i>	890
	<i>Process Design Considerations</i>	801	<b>9-2</b>	<b>Trickling Filters</b>	890
	<i>Process Control</i>	804		<i>Trickling Filter Classification and Applications</i>	893
	<i>Solids Separation Facilities</i>	805		<i>Design of Physical Facilities</i>	896
	<i>Methods to Improve Phosphorus-Removal Efficiency in BPR Systems</i>	805		<i>Process Design Considerations</i>	909
	<i>Biological Phosphorus-Removal Process Performance</i>	807		<i>Nitrification Design</i>	922
	<i>Alternative Processes for Biological Phosphorus Removal</i>	809	<b>9-3</b>	<b>Rotating Biological Contactors</b>	930
	<i>Process Design Parameters</i>	809		<i>Process Design Considerations</i>	932
	<i>Process Selection Considerations</i>	809		<i>Physical Facilities for RBC Process</i>	935
<b>8-7</b>	<b>Selection and Design of Physical Facilities for Activated-Sludge Processes</b>	816		<i>RBC Process Design</i>	937
	<i>Aeration System</i>	816	<b>9-4</b>	<b>Combined Aerobic Treatment Processes</b>	940
	<i>Aeration Tanks and Appurtenances</i>	816		<i>Trickling Filter/Solids Contact and Trickling Filter/Activated-Sludge Processes</i>	940
				<i>Activated Biofilter and Biofilter Activated-Sludge Processes</i>	943
				<i>Series Trickling Filter-Activated-Sludge Process</i>	944

	<i>Design Considerations for Combined Trickling Filter Activated-Sludge Systems</i>	944		<i>Ammonia Toxicity</i>	995
<b>9-5</b>	<i>Activated Sludge with Fixed-Film Packing</i>	952	<b>10-3</b>	<i>Anaerobic Suspended Growth Processes</i>	996
	<i>Processes with Internal Suspended Packing for Attached Growth</i>	952		<i>Complete-Mix Process</i>	997
	<i>Processes with Internal Fixed Packing for Attached Growth</i>	955		<i>Anaerobic Contact Process</i>	997
<b>9-6</b>	<i>Submerged Attached Growth Processes</i>	957		<i>Anaerobic Sequencing Batch Reactor</i>	999
	<i>Downflow Submerged Attached Growth Processes</i>	957	<b>10-4</b>	<i>Design of Anaerobic Suspended Growth Processes</i>	999
	<i>Upflow Submerged Attached Growth Processes</i>	959		<i>Anaerobic Sludge Blanket Processes</i>	1005
	<i>Fluidized-Bed Bioreactors (FBBR)</i>	961		<i>Upflow Sludge Blanket Reactor Process</i>	1005
<b>9-7</b>	<i>Attached Growth</i>			<i>Design Considerations for UASB Process</i>	1007
	<i>Denitrification Processes</i>	962		<i>Anaerobic Baffled Reactor</i>	1016
	<i>Downflow Packed-Bed Postanoxic Denitrification Processes</i>	962		<i>Anaerobic Migrating Blanket Reactor</i>	1017
	<i>Upflow Packed-Bed Postanoxic Denitrification Reactors</i>	967	<b>10-5</b>	<i>Attached Growth Anaerobic Processes</i>	1018
	<i>Fluidized-Bed Reactors for Postanoxic Denitrification</i>	967		<i>Upflow Packed-Bed Attached Growth Reactor</i>	1019
	<i>Submerged Rotating Biological Contactors</i>	969		<i>Upflow Attached Growth Anaerobic Expanded-Bed Reactor</i>	1020
	<i>Attached Growth Preanoxic Denitrification Processes</i>	969		<i>Attached Growth Anaerobic Fluidized-Bed Reactor</i>	1020
<b>10</b>	<b>Anaerobic Suspended and Attached Growth Biological Treatment Processes</b>	983		<i>Downflow Attached Growth Processes</i>	1022
<b>10-1</b>	<i>The Rationale for Anaerobic Treatment</i>	984	<b>10-6</b>	<i>Other Anaerobic Treatment Processes</i>	1024
	<i>Advantages of Anaerobic Treatment Processes</i>	984		<i>Covered Anaerobic Lagoon Process</i>	1024
	<i>Disadvantages of Anaerobic Treatment Processes</i>	986		<i>Membrane Separation Anaerobic Treatment Process</i>	1026
	<i>Summary Assessment</i>	986	<b>11</b>	<b>Advanced Wastewater Treatment</b>	1035
<b>10-2</b>	<i>General Design Considerations for Anaerobic Treatment Processes</i>	986	<b>11-1</b>	<i>Need for Advanced Wastewater Treatment</i>	1037
	<i>Characteristics of the Wastewater</i>	987	<b>11-2</b>	<i>Technologies Used for Advanced Treatment</i>	1038
	<i>Solids Retention Time</i>	991		<i>Residual Constituents in Treated Wastewater</i>	1038
	<i>Expected Methane Gas Production</i>	992		<i>Classification of Technologies</i>	1038
	<i>Treatment Efficiency Needed</i>	994		<i>Removal of Organic and Inorganic Colloidal and Suspended Solids</i>	1038
	<i>Sulfide Production</i>	994		<i>Removal of Dissolved Organic Constituents</i>	1040
				<i>Removal of Dissolved Inorganic Constituents</i>	1041
				<i>Removal of Biological Constituents</i>	1043
				<i>Process Selection and Performance Data</i>	1044

<b>11-3</b>	Introduction to Depth Filtration	1044	<i>Analysis and Design of Granular Activated Carbon Contactor</i>	1152
	<i>Description of the Filtration Process</i>	1044	<i>Small-Scale Column Tests</i>	1156
	<i>Filter Hydraulics</i>	1050	<i>Analysis and Design of Powdered Activated Carbon Contactor</i>	1159
	<i>Analysis of the Filtration Process</i>	1057	<i>Activated Sludge with Powdered Activated Carbon Treatment</i>	1161
<b>11-4</b>	Selection and Design Considerations for Depth Filters	1069	<b>11-8</b> Gas Stripping	1162
	<i>Available Filtration Technologies</i>	1069	<i>Analysis of Gas Stripping</i>	1163
	<i>Performance of Different Types of Filter Technologies</i>	1078	<i>Design of Stripping Towers</i>	1174
	<i>Issues Related to Design and Operation of Treatment Facilities</i>	1080	<i>Application</i>	1178
