

# ECOLOGY OF FRESH WATERS

Man and Medium, Past to Future

BRIAN MOSS

THIRD EDITION

# Contents

## **Preface and Acknowledgements, xv**

### **1 Introduction: the Pantanal, 1**

- 1.1 The environmental theatre, 1
- 1.2 The evolutionary play, 2
- 1.3 The freshwater part of the stage, 3
- 1.4 The Pantanal, 4
  - 1.4.1 The physical and chemical environment, 4
  - 1.4.2 Biogeography of the Pantanal, 6
  - 1.4.3 The present biota, 9
  - 1.4.4 Community structure, 10
  - 1.4.5 Vertebrates other than fish, 10
  - 1.4.6 Humans, 11
- 1.5 End of the overture, 13

### **2 On Living in Water, 14**

- 2.1 Properties of water, 15
  - 2.1.1 Physical properties, 15
  - 2.1.2 Water as a solvent, 17
  - 2.1.3 Solubility of non-ionic compounds, 19
- 2.2 Land and water habitats and the evolution of aquatic organisms, 20
  - 2.2.1 Physiological problems of living in water, 21
  - 2.2.2 Brackish and freshwater invertebrates, 22
  - 2.2.3 Osmotic relationships in vertebrates, 23
  - 2.2.4 Colonisation of fresh waters from the land, 24
  - 2.2.5 Respiration in water, 26
  - 2.2.6 Invertebrate air breathers in fresh waters, 27
- 2.3 Time and fleetingness – a fundamental difference between freshwater and marine ecosystems, 28
  - 2.3.1 Low diversity and the colonisation of fresh waters, 28
  - 2.3.2 Evolution in freshwater habitats, 31
  - 2.3.3 Evolution in tropical African lakes, 31

### **3 From Atmosphere to Stream: the Chemical Birth of Fresh Waters, 36**

- 3.1 Dissolving of atmospheric gases and the acidity of rain, 36
  - 3.1.1 Carbon dioxide and sulphur gases, 36
- 3.2 Contribution of sea spray to rain, 37

- 3.3 Atmospheric pollution, 37
  - 3.3.1 Carbon and sulphur, 37
  - 3.3.2 Nitrogen, 39
  - 3.3.3 Acid precipitation, 41
  - 3.3.4 Nutrients delivered by the atmosphere, 41
  - 3.3.5 Models of nitrogen deposition, 42
- 3.4 The composition of water draining from the catchments, 44
  - 3.4.1 A chemical catalogue for runoff waters, 44
  - 3.4.2 Rock weathering, 47
  - 3.4.3 Weathering of igneous rocks, 47
  - 3.4.4 Sedimentary and metamorphic rocks, 49
  - 3.4.5 Weathering of sedimentary rocks, 49
  - 3.4.6 Links between geology and water chemistry, 51
- 3.5 Effects of soil development and vegetation on the chemistry of drainage waters, 52
  - 3.5.1 Nitrogen fixation, 53
  - 3.5.2 Storage in the plant biomass, 54
  - 3.5.3 Vegetation and the supply of suspended silt and dissolved and suspended organic matter to drainage waters, 60
  - 3.5.4 Particulate organic matter, 60
  - 3.5.5 Dissolved organic matter, 61
  - 3.5.6 Labile organic compounds, 62
- 3.6 Effects of human activities on the composition of drainage waters, 63
  - 3.6.1 Agriculture, 63
  - 3.6.2 Catchment planning and export-coefficient models, 65
  - 3.6.3 Agricultural chemicals other than nutrients, 68
  - 3.6.4 Settlement, 70
  - 3.6.5 Industry, 71
  - 3.6.6 Disposal and consents, 73
  - 3.6.7 Industrial atmospheric sources, 75
- 3.7 The water rolls downhill, 75

## **4 Erosive Streams and Rivers, 77**

- 4.1 Introduction, 77
  - 4.1.1 A model stream, 77
- 4.2 Upland streams – three general questions, 80
  - 4.2.1 On the rocks, 80
  - 4.2.2 Adaptation to moving water, 83
  - 4.2.3 Drift, 84
- 4.3 Sources of food and energy flow in erosive streams, 86
  - 4.3.1 Hot-spring streams, 86
  - 4.3.2 Streams in wooded catchments – Bear Brook, 89
  - 4.3.3 Mechanics of processing of organic matter in woodland streams, 92
  - 4.3.4 The shredders, 92
  - 4.3.5 Collectors, scrapers and carnivores, 94
  - 4.3.6 New Zealand streams, 96
  - 4.3.7 Fish in upland streams, 99

- 4.3.8 The Atlantic salmon, 101
- 4.3.9 Animal production in streams, 102
- 4.4 Stream communities, 104
  - 4.4.1 Do distinct stream communities exist? 105
  - 4.4.2 Competition in structuring stream communities, 108
- 4.5 Erosive streams and human activities, 109
  - 4.5.1 River blindness and the Blandford fly, 109
  - 4.5.2 Game fisheries, 110
- 4.6 Alterations to upland streams by human activities, 112
  - 4.6.1 Acidification, 112
  - 4.6.2 Changes in land use, 116
  - 4.6.3 Physical alteration of the streams, 118
  - 4.6.4 River-regulating reservoirs, 120
  - 4.6.5 Alterations of the fish community by man, 121

## **5 Lowland Rivers, their Floodplains and Wetlands, 123**

- 5.1 Submerged plants, 123
- 5.2 Growth of submerged plants, 127
- 5.3 Methods of measuring the primary productivity of submerged plants, 130
  - 5.3.1 Whole-community methods, 130
  - 5.3.2 Enclosure methods, 131
- 5.4 Submerged plants and the river ecosystem, 134
  - 5.4.1 Plant-bed management in rivers, 134
  - 5.4.2 Ecotoxicology – the testing of potentially hazardous chemicals, 136
- 5.5 Further downstream – swamps and flood-plains, 138
  - 5.5.1 Productivity of swamps and flood-plain marshes, 138
  - 5.5.2 Swamp soils and the fate of the high primary production, 139
  - 5.5.3 Oxygen supply and soil chemistry in swamps, 140
  - 5.5.4 Emergent plants and flooded soils, 143
- 5.6 Swamp and marsh animals, 144
  - 5.6.1 Whitefish and blackfish, 145
- 5.7 Human societies of floodplains, 149
  - 5.7.1 Tolerators – the marsh Arabs, 149
  - 5.7.2 Migrants – the Nuer of southern Sudan, 150
- 5.8 Floodplain fisheries, 154
- 5.9 Modification of floodplain ecosystems, 156
  - 5.9.1 Wetland values, 156
  - 5.9.2 Swamps and nutrient retention – reed-bed treatment, 158
  - 5.9.3 Floodplain swamps and human diseases, 160
- 5.10 Drainage and other alterations to floodplain ecosystems, 164
  - 5.10.1 The Florida Everglades, 164
  - 5.10.2 Drainage and river management in temperate regions, 170
  - 5.10.3 River restoration, 172
  - 5.10.4 Approaches and methods of river and floodplain restoration, 173
- 5.11 Lowland river channels, 179
  - 5.11.1 Pollution by organic matter, 180
  - 5.11.2 Sewage treatment, 181

- 5.11.3 Pollution monitoring, 184
- 5.11.4 The river invertebrate prediction and classification system, 187
- 5.11.5 Current problems of river pollution, 187
- 5.11.6 Heavy metals, 188
- 5.11.7 Problems in pollution management, 190
- 5.12 Interbasin transfers and water needs, 190
  - 5.12.1 The Jonglei Canal, 191
  - 5.12.2 Assessment of the water needs of donor rivers when transfers are proposed, 192

## **6 Lakes, Pools and Other Standing Waters: Some Basic Features of their Productivity, 196**

- 6.1 Exorheic lakes, 198
- 6.2 The essential features and parts of a lake, 202
  - 6.2.1 Light availability, 202
  - 6.2.2 The euphotic zone, 205
  - 6.2.3 Thermal stratification and the structure of water masses, 207
  - 6.2.4 Key nutrients, 212
  - 6.2.5 Nutrient 'limitation', 213
  - 6.2.6 How the total phosphorus or nitrogen concentrations of a lake come about, 215
  - 6.2.7 Demonstration of catchment dependence, 216
  - 6.2.8 Consequences of thermal stratification, 217
  - 6.2.9 Consequences for water chemistry, 220
  - 6.2.10 Sediment and the oxidized micromere, 222
  - 6.2.11 Shallow lakes, tropical lakes and other scenarios, 223
  - 6.2.12 Aquatic plant communities and the morphometry of basins, 227
  - 6.2.13 Alternative stable states in shallow lakes, 228
- 6.3 General models of lake production, 232
  - 6.3.1 Models incorporating other features, 234
- 6.4 Eutrophication and acidification – human-induced changes in the production of lakes, 235
  - 6.4.1 Eutrophication, 235
  - 6.4.2 Eutrophication in the tropics – Lake Victoria, 238
  - 6.4.3 Solving the eutrophication problem, 240
  - 6.4.4 What are the present supplies of phosphorus and their relative contributions? 241
  - 6.4.5 Relationship of the phosphorus concentration to the algal crop, 242
  - 6.4.6 Methods available for reducing total phosphorus loads, 243
  - 6.4.7 In-lake methods, 247
  - 6.4.8 Complications for phosphorus control – sediment sources, 248
  - 6.4.9 Shallow-lake restoration, 251
  - 6.4.10 Twists in the tails, 253
- 6.5 Acidification, 255
  - 6.5.1 Remediation, 255
  - 6.5.2 Targets, 257
- 6.6 Variations on the theme – other standing waters, 260

- 6.6.1 Rainwater pools. 260
- 6.6.2 Meromictic lakes. 261
- 6.6.3 Endorheic lakes. 263

## **7 The Plankton and Fish Communities of the Open Water of Lakes, 267**

- 7.1 The structure of the plankton community. 267
- 7.2 Phytoplankton. 269
  - 7.2.1 Photosynthesis and growth of phytoplankton. 273
  - 7.2.2 Net production and growth. 276
  - 7.2.3 Nutrient uptake and growth rates of phytoplankton. 277
  - 7.2.4 Distribution of freshwater phytoplankton. 279
  - 7.2.5 The desmid plankton. 280
  - 7.2.6 Washout, mixing and stratification. 284
  - 7.2.7 Blue-green algal blooms. 284
  - 7.2.8 Phytoplankton communities, toxic algae and drinking-water. 287
- 7.3 Microconsumers of the phytoplankton - bacteria. 289
- 7.4 Protozoa and fungi. 290
- 7.5 Zooplankton. 291
  - 7.5.1 Grazing. 294
  - 7.5.2 Feeding and grazing rates of zooplankton. 297
  - 7.5.3 Competition among grazers. 298
  - 7.5.4 Predation in the zooplankton. 299
- 7.6 Fish in the open-water community. 305
  - 7.6.1 Predation on the zooplankton and fish production. 308
  - 7.6.2 Predation by fish and the composition of zooplankton communities. 309
  - 7.6.3 Predator avoidance by the zooplankton. 311
  - 7.6.4 Piscivores and piscivory. 313
  - 7.6.5 A key role for *Daphnia*. 314
- 7.7 Functioning of the open-water community. 315
  - 7.7.1 Cycling of phosphorus in the plankton. 315
  - 7.7.2 The nitrogen cycle in the plankton. 317
- 7.8 Seasonal changes in the plankton. 319
  - 7.8.1 Mechanisms underlying algal periodicity. 322
- 7.9 Practical applications of plankton biology: treatment of eutrophication by biomanipulation in deep lakes. 325
  - 7.9.1 Experiments on whole lakes. 328
  - 7.9.2 Scope of biomanipulation. 331

## **8 The Littoral and Profundal Communities of Lakes, 334**

- 8.1 A variety of habitats. 334
- 8.2 Submerged plant communities in lakes. 338
  - 8.2.1 Microbial communities in plant beds. 341
  - 8.2.2 Epiphytic algae. 341
  - 8.2.3 Invertebrates. 345
- 8.3 Competition between submerged plants and phytoplankton. 350

- 8.3.1 Consequences of the loss of aquatic plants. 352
- 8.3.2 Restoration of shallow lakes back to plant dominance. 354
- 8.3.3 Ponds and pond loss. 356
- 8.4 Bare rocks and sandy littoral habitats. 358
  - 8.4.1 Distribution of triclads in the British Isles. 359
  - 8.4.2 Rocky-shore communities. 361
  - 8.4.3 Specialization in the rocky littoral. 363
  - 8.4.4 Sandy shores. 365
  - 8.4.5 Zebra mussels – a problem. 366
- 8.5 Relationships between the littoral zone and the open water. 367
- 8.6 The profundal benthos. 370
  - 8.6.1 Biology of selected benthic invertebrates. 373
  - 8.6.2 What the sediment-living invertebrates really eat. 377
- 8.7 Influence of the open-water community on the profundal benthos. 378

## 9 Fish and Fisheries in Lakes, 386

- 9.1 Some basic fish biology. 386
  - 9.1.1 Eggs. 388
  - 9.1.2 Feeding. 389
  - 9.1.3 Breeding. 391
- 9.2 Choice of fish for a fishery. 396
- 9.3 Measurement of fish production. 399
  - 9.3.1 Growth measurement. 401
  - 9.3.2 Fish production in lakes. 403
- 9.4 Commercial fisheries. 404
- 9.5 The North Buvuma Island fishery. 407
  - 9.5.1 Estimation of  $t_0$ ,  $F_k$  and  $M_0$  for the Buvuma *Oreochromis* fishery. 408
- 9.6 Approximate methods for yield assessment. 411
- 9.7 Changes in fisheries. 413
  - 9.7.1 The North American Great Lakes. 413
  - 9.7.2 The East African Great Lakes. 416
- 9.8 Fish culture. 423
- 9.9 Still-water angling. 424

## 10 The Birth, Development and Extinction of Lakes, 428

- 10.1 Introduction. 428
- 10.2 Man-made lakes. 430
  - 10.2.1 Fisheries in new tropical lakes. 434
  - 10.2.2 Effects downstream of the new lake. 435
  - 10.2.3 New tropical lakes and human populations. 436
  - 10.2.4 Man-made tropical lakes – the balance of pros and cons. 436
- 10.3 The development of lake ecosystems. 438
  - 10.3.1 Dating the sediment. 439
  - 10.3.2 Radiometric-decay techniques. 441
  - 10.3.3 Non-radiometric-decay methods. 442
- 10.4 Sources of information in sediments. 444
  - 10.4.1 Chemistry. 444

- 10.4.2 Fossils, 448
- 10.4.3 Diatom remains, 450
- 10.4.4 Pollen, 453
- 10.4.5 General problems of interpretation of evidence from sediment cores, 454
- 10.5 Examples of lake development, 455
  - 10.5.1. Blen Tarn, English Lake District, 455
  - 10.5.2 Esthwaite, 457
  - 10.5.3 Pickerel Lake, 460
  - 10.5.4 White Mere, 462
  - 10.5.5 Lago di Monterosi, 464
  - 10.5.6 Lake Valencia, 466
- 10.6 Filling in of shallow lakes, 468
  - 10.6.1 Tarn Moss, Malham, 468
- 10.7 Patterns in the development of lakes and the concept of natural eutrophication, 471

## **11 Fresh Waters, the World and the Future, 473**

- 11.1 Introduction, 473
  - 11.1.1 Population, food supply and water, 476
  - 11.1.2 Resource use and water, 478
  - 11.1.3 Technology and water, 479
- 11.2 Trends in freshwater science, 480
  - 11.2.1 New genetic technologies, 480
  - 11.2.2 Ecotoxicology, 481
  - 11.2.3 Levels of approach, 483
- 11.3 Advances in monitoring techniques, 485
- 11.4 Solving the problems, 487
  - 11.4.1 Treaties, 488
  - 11.4.2 Consequences of evolution? 492
- 11.5 Alternative states and human societies, 493
  - 11.5.1 The future, 498
