Natural Wastewater Treatment Systems

Taylor & Francis
Taylor & Francis Group

Table of Contents

Chapter 1	Natural Waste Treatment Systems: An Overview	1
1.1	Natural Treatment Processes	1
1.1.1	Background	1
1.1.2	Wastewater Treatment Concepts and Performance Expectations	2
1.1.2.1	Aquatic Treatment Units	2
1.1.2.2	Wetland Treatment Units	5
1.1.2.3	Terrestrial Treatment Methods	5
1.1.2.4	Sludge Management Concepts	8
1.1.2.5	Costs and Energy	8
1.2	Project Development	9
	References	10
Chapter 2	Planning, Feasibility Assessment, and Site Selection	11
2.1	Concept Evaluation	11
2.1.1	Information Needs and Sources	12
2.1.2	Land Area Required	14
2.1.2.1	Treatment Ponds	14
2.1.2.2	Free Water Surface Constructed Wetlands	15
2.1.2.3	Subsurface Flow Constructed Wetlands	16
2.1.2.4	Overland Flow Systems	16
2.1.2.5	Slow-Rate Systems	17
2.1.2.6	Soil Aquifer Treatment Systems	18
2.1.2.7	Land Area Comparison	18
2.1.2.8	Biosolids Systems	19
2.2	Site Identification	19
2.2.1	Site Screening Procedure	20
2.2.2	Climate	26
2.2.3	Flood Hazard	26
2.2.4	Water Rights	27
2.3	Site Evaluation	28
2.3.1	Soils Investigation	28
2.3.1.1	Soil Texture and Structure	30
2.3.1.2	Soil Chemistry	30
2.3.2	Infiltration and Permeability	33
2.3.2.1	Saturated Permeability	33
2.3.2.2	Infiltration Capacity	35
2.3.2.3	Porosity	35
2.3.2.4	Specific Yield and Specific Retention	35
2.3.2.5	Field Tests for Infiltration Rate	36

2.3.3	Subsurface Permeability and Groundwater Flow	39
2.3.3.1	Buffer Zones	40
2.4	Site and Process Selection	41
	References	41

Chapter 3 Basic Process Responses and Interactions43

3.1	Water Management	43
3.1.1	Fundamental Relationships	43
3.1.1.1	Permeability	44
3.1.1.2	Groundwater Flow Velocity	45
3.1.1.3	Aquifer Transmissivity	45
3.1.1.4	Dispersion	45
3.1.1.5	Retardation	46
3.1.2	Movement of Pollutants	47
3.1.3	Groundwater Mounding	51
3.1.4	Underdrainage	58
3.2	Biodegradable Organics	60
3.2.1	Removal of BOD	60
3.2.2	Removal of Suspended Solids	61
3.3	Organic Priority Pollutants	62
3.3.1	Removal Methods	62
3.3.1.1	Volatilization	62
3.3.1.2	Adsorption	65
3.3.2	Removal Performance	69
3.3.3	Travel Time in Soils	70
3.4	Pathogens	71
3.4.1	Aquatic Systems	71
3.4.1.2	Bacteria and Virus Removal	71
3.4.2	Wetland Systems	73
3.4.3	Land Treatment Systems	75
3.4.3.1	Ground Surface Aspects	75
3.4.3.2	Groundwater Contamination	75
3.4.4	Sludge Systems	76
3.4.5	Aerosols	77
3.5	Metals	81
3.5.1	Aquatic Systems	82
3.5.2	Wetland Systems	84
3.5.3	Land Treatment Systems	84
3.6	Nutrients	86
3.6.1	Nitrogen	86
3.6.1.1	Pond Systems	87
3.6.1.2	Aquatic Systems	87
3.6.1.3	Wetland Systems	88
3.6.1.4	Land Treatment Systems	88
3.6.2	Phosphorus	88

3.6.3	Potassium and Other Micronutrients	90
3.6.3.1	Boron	91
3.6.3.2	Sulfur	91
3.6.3.3	Sodium	91
References		92
Chapter 4	Design of Wastewater Pond Systems	95
4.1	Introduction	95
4.1.1	Trends	95
4.2	Facultative Ponds	96
4.2.1	Areal Loading Rate Method	97
4.2.2	Gloyna Method	99
4.2.3	Complete-Mix Model	101
4.2.4	Plug-Flow Model	102
4.2.5	Wehner-Wilhelm Equation	103
4.2.6	Comparison of Facultative Pond Design Models	107
4.3	Partial-Mix Aerated Ponds	109
4.3.1	Partial-Mix Design Model	110
4.3.1.1	Selection of Reaction Rate Constants	111
4.3.1.2	Influence of Number of Cells	111
4.3.1.3	Temperature Effects	112
4.3.2	Pond Configuration	112
4.3.3	Mixing and Aeration	113
4.4	Complete-Mix Aerated Pond Systems	123
4.4.1	Design Equations	124
4.4.1.1	Selection of Reaction Rate Constants	125
4.4.1.2	Influence of Number of Cells	125
4.4.1.3	Temperature Effects	126
4.4.2	Pond Configuration	126
4.4.3	Mixing and Aeration	127
4.5	Anaerobic Ponds	133
4.5.1	Introduction	133
4.5.2	Design	136
4.6	Controlled Discharge Pond System	140
4.7	Complete Retention Pond System	140
4.8	Hydrograph Controlled Release	140
4.9	High-Performance Aerated Pond Systems (Rich Design)	141
4.9.1	Performance Data	142
4.10	Proprietary Systems	144
4.10.1	Advanced Integrated Wastewater Pond Systems®	144
4.10.1.1	Hotchkiss, Colorado	146
4.10.1.2	Dove Creek, Colorado	147
4.10.2	BIOLAC® Process (Activated Sludge in Earthen Ponds)	149
4.10.2.1	BIOLAC® Processes	154
4.10.2.1.1	BIOLAC-R System	155
4.10.2.1.2	BIOLAC-L System	156

4.10.2.1.3	Wave-Oxidation [®] Modification.....	157
4.10.2.1.4	Other Applications	157
4.10.2.2	Unit Operations	159
4.10.2.2.1	Aeration Chains and Diffuser Assemblies	159
4.10.2.2.2	Blowers and Air Manifold	159
4.10.2.2.3	Clarification and Solids Handling	159
4.10.2.2.4	BIOLAC-L Settling Basin	160
4.10.2.3	Performance Data.....	160
4.10.2.4	Operational Problems.....	164
4.10.3	LEMNA Systems	164
4.10.3.1	Lemna Duckweed System	164
4.10.3.2	Performance Data.....	165
4.10.3.3	LemTec [™] Biological Treatment Process	165
4.10.4	Las International, Ltd.....	171
4.10.5	Praxair, Inc.	172
4.10.6	Ultrafiltration Membrane Filtration	172
4.11	Nitrogen Removal in Lagoons	172
4.11.1	Introduction	172
4.11.2	Facultative Systems	173
4.11.2.1	Theoretical Considerations	176
4.11.2.2	Design Models	178
4.11.2.3	Applications	181
4.11.2.4	Summary	181
4.11.3	Aerated Lagoons	182
4.11.3.1	Comparison of Equations	182
4.11.3.2	Summary	187
4.11.4	Pump Systems, Inc., Batch Study.....	188
4.11.5	Commercial Products	189
4.11.5.1	Add Solids Recycle.....	189
4.11.5.2	Convert to Sequencing Batch Reactor Operation	192
4.11.5.3	Install Biomass Carrier Elements	192
4.11.5.4	Commercial Lagoon Nitrification Systems	193
4.11.5.4.1	ATLAS-IS [™]	193
4.11.5.4.2	CLEAR [™] Process	193
4.11.5.4.3	Ashbrook SBR	194
4.11.5.4.4	AquaMat [®] Process	194
4.11.5.4.5	MBBR [™] Process.....	196
4.11.5.5	Other Process Notes.....	196
4.11.5.6	Ultrafiltration Membrane Filtration	198
4.11.5.7	BIOLAC [®] Process (Parkson Corporation)	198
4.12	Modified High-Performance Aerated Pond Systems for Nitrification and Denitrification.....	199
4.13	Nitrogen Removal in Ponds Coupled with Wetlands and Gravel Bed Nitrification Filters.....	199
4.14	Control of Algae and Design of Settling Basins	200
4.15	Hydraulic Control of Ponds	200
4.16	Removal of Phosphorus	201

4.16.1 Batch Chemical Treatment.....	202
4.16.2 Continuous-Overflow Chemical Treatment	202
References	203

Chapter 5 Pond Modifications for Polishing Effluents211

5.1 Solids Removal Methods	211
5.1.1 Introduction	211
5.1.2 Intermittent Sand Filtration.....	211
5.1.2.1 Summary of Performance	214
5.1.2.2 Operating Periods.....	215
5.1.2.3 Maintenance Requirements.....	215
5.1.2.4 Hydraulic Loading Rates	215
5.1.2.5 Design of Intermittent Sand Filters	215
5.1.3 Rock Filters	227
5.1.3.1 Performance of Rock Filters.....	228
5.1.3.2 Design of Rock Filters	230
5.1.4 Normal Granular Media Filtration.....	230
5.1.5 Coagulation-Flocculation	238
5.1.6 Dissolved-Air Flotation.....	239
5.2 Modifications and Additions to Typical Designs	243
5.2.1 Controlled Discharge	243
5.2.2 Hydrograph Controlled Release.....	245
5.2.3 Complete Retention Ponds.....	246
5.2.4 Autoflocculation and Phase Isolation	247
5.2.5 Baffles and Attached Growth	247
5.2.6 Land Application	248
5.2.7 Macrophyte and Animal Systems	248
5.2.7.1 Floating Plants	248
5.2.7.2 Submerged Plants.....	248
5.2.7.3 <i>Daphnia</i> and Brine Shrimp.....	248
5.2.7.4 Fish	249
5.2.8 Control of Algae Growth by Shading and Barley Straw	249
5.2.8.1 Dyes.....	249
5.2.8.2 Fabric Structures	249
5.2.8.3 Barley Straw.....	249
5.2.8.4 Lemna Systems	250
5.3 Performance Comparisons with Other Removal Methods	250
References	252

Chapter 6 Free Water Surface Constructed Wetlands259

6.1 Process Description.....	259
6.2 Wetland Components	261
6.2.1 Types of Plants	261
6.2.2 Emergent Species	262
6.2.2.1 Cattail	262

	6.2.2.2	Bulrush	262
	6.2.2.3	Reeds	263
	6.2.2.4	Rushes	263
	6.2.2.5	Sedges	263
	6.2.3	Submerged Species	264
	6.2.4	Floating Species	264
	6.2.5	Evapotranspiration Losses	264
	6.2.6	Oxygen Transfer	265
	6.2.7	Plant Diversity	266
	6.2.8	Plant Functions	268
	6.2.9	Soils	267
	6.2.10	Organisms	268
6.3		Performance Expectations	268
	6.3.1	BOD Removal	269
	6.3.2	Suspended Solids Removal	269
	6.3.3	Nitrogen Removal	269
	6.3.4	Phosphorus Removal	272
	6.3.5	Metals Removal	273
	6.3.6	Temperature Reduction	274
	6.3.7	Trace Organics Removal	274
	6.3.8	Pathogen Removal	275
	6.3.9	Background Concentrations	277
6.4		Potential Applications	278
	6.4.1	Municipal Wastewaters	278
	6.4.2	Commercial and Industrial Wastewaters	281
	6.4.3	Stormwater Runoff	282
	6.4.4	Combined Sewer Overflow	283
	6.4.5	Agricultural Runoff	286
	6.4.6	Livestock Wastewaters	288
	6.4.7	Food Processing Wastewater	289
	6.4.8	Landfill Leachates	289
	6.4.9	Mine Drainage	291
6.5		Planning and Design	296
	6.5.1	Site Evaluation	297
	6.5.2	Preapplication Treatment	297
	6.5.3	General Design Procedures	297
6.6		Hydraulic Design Procedures	299
6.7		Thermal Aspects	302
	6.7.1	Case 1. Free Water Surface Wetland Prior to Ice Formation	303
	6.7.2	Case 2. Flow Under an Ice Cover	304
	6.7.3	Case 3. Free Water Surface Wetland and Thickness of Ice Formation	305
	6.7.4	Summary	307
6.8		Design Models and Effluent Quality Prediction	308
	6.8.1	Volumetric Model	308
	6.8.1.1	Advantages	308
	6.8.1.2	Limitations	309

6.8.2	Areal Loading Model	309
6.8.2.1	Advantages	309
6.8.2.2	Limitations	309
6.8.3	Effluent Quality Prediction	309
6.8.4	Design Criteria	314
6.9	Physical Design and Construction	314
6.9.1	Earthwork	314
6.9.2	Liners	316
6.9.3	Inlet and Outlet Structures	316
6.9.4	Vegetation	318
6.10	Operation and Maintenance	320
6.10.1	Vegetation Establishment	320
6.10.2	Nuisance Animals	323
6.10.3	Mosquito Control	323
6.10.4	Monitoring	324
6.11	Costs	324
6.11.1	Geotechnical Investigations	325
6.11.2	Clearing and Grubbing	326
6.11.3	Earthwork	326
6.11.4	Liners	327
6.11.5	Vegetation Establishment	327
6.11.6	Inlet and Outlet Structures	327
6.11.7	Piping, Equipment, and Fencing	328
6.11.8	Miscellaneous	328
6.12	Troubleshooting	328
	References	329

Chapter 7 Subsurface and Vertical Flow Constructed Wetlands 335

7.1	Hydraulics of Subsurface Flow Wetlands	335
7.2	Thermal Aspects	339
7.3	Performance Expectations	343
7.3.1	BOD Removal	344
7.3.2	TSS Removal	344
7.3.3	Nitrogen Removal	344
7.3.4	Phosphorus Removal	345
7.3.5	Metals Removal	345
7.3.6	Pathogen Removal	345
7.4	Design of SSF Wetlands	346
7.4.1	BOD Removal	346
7.4.2	TSS Removal	347
7.4.3	Nitrogen Removal	347
7.4.3.1	Nitrification	349
7.4.3.2	Denitrification	351
7.4.3.3	Total Nitrogen	352
7.4.4	Aspect Ratio	352

7.5	Design Elements of Subsurface Flow Wetlands	353
7.5.1	Pretreatment.....	353
7.5.2	Media.....	353
7.5.3	Vegetation.....	353
7.5.4	Inlet Distribution	354
7.5.5	Outlet Collection	355
7.6	Alternative Application Strategies	355
7.6.1	Batch Flow	355
7.6.2	Reciprocating (Alternating) Dosing (TVA).....	356
7.7	Potential Applications.....	356
7.7.1	Domestic Wastewater	356
7.7.2	Landfill Leachate.....	357
7.7.3	Cheese Processing Wastewater	357
7.7.4	Airport Deicing Fluids Treatment.....	357
7.8	Case Study: Minoa, New York	357
7.9	Nitrification Filter Bed	360
7.10	Design of On-Site Systems	364
7.11	Vertical-Flow Wetland Beds	366
7.11.1	Municipal Systems.....	368
7.11.2	Tidal Vertical-Flow Wetlands.....	369
7.11.3	Winery Wastewater.....	369
7.12	Construction Considerations.....	370
7.12.1	Vegetation Establishment	372
7.13	Operation and Maintenance.....	373
7.14	Costs.....	373
7.15	Troubleshooting	374
	References	374
Chapter 8	Land Treatment Systems.....	379
8.1	Types of Land Treatment Systems	379
8.1.1	Slow-Rate Systems.....	379
8.1.2	Overland Flow Systems	379
8.1.3	Soil Aquifer Treatment Systems	382
8.2	Slow Rate Land Treatment	384
8.2.1	Design Objectives	384
8.2.1.1	Management Alternatives.....	384
8.2.2	Preapplication Treatment	384
8.2.2.1	Distribution System Constraints	386
8.2.2.2	Water Quality Considerations.....	386
8.2.2.3	Groundwater Protection	388
8.2.3	Design Procedure	388
8.2.4	Crop Selection	388
8.2.4.1	Type 1 System Crops.....	388
8.2.4.2	Type 2 System Crops.....	390
8.2.5	Hydraulic Loading Rates	392
8.2.5.1	Hydraulic Loading for Type 1 Slow-Rate Systems	390
8.2.5.2	Hydraulic Loading for Type 2 Slow-Rate Systems	391

8.2.6	Design Considerations	392
8.2.6.1	Nitrogen Loading Rate	392
8.2.6.2	Organic Loading Rate	394
8.2.6.3	Land Requirements	394
8.2.6.4	Storage Requirements	396
8.2.6.5	Distribution Techniques	400
8.2.6.6	Application Cycles	401
8.2.6.7	Surface Runoff Control	401
8.2.6.8	Underdrainage	401
8.2.7	Construction Considerations	401
8.2.8	Operation and Maintenance	402
8.3	Overland Flow Systems	402
8.3.1	Design Objectives	402
8.3.2	Site Selection	403
8.3.3	Treatment Performance	403
8.3.3.1	BOD Loading and Removal	403
8.3.3.2	Suspended Solids Removal	403
8.3.3.3	Nitrogen Removal	405
8.3.3.4	Phosphorus and Heavy Metal Removal	406
8.3.3.5	Trace Organics	406
8.3.3.6	Pathogens	407
8.3.4	Preapplication Treatment	407
8.3.5	Design Criteria	407
8.3.5.1	Application Rate	408
8.3.5.2	Slope Length	408
8.3.5.3	Hydraulic Loading Rate	409
8.3.5.4	Application Period	409
8.3.6	Design Procedure	409
8.3.6.1	Municipal Wastewater, Secondary Treatment	409
8.3.6.2	Industrial Wastewater, Secondary Treatment	409
8.3.7	Design Considerations	410
8.3.7.1	Land Requirements	410
8.3.7.2	Storage Requirements	411
8.3.7.3	Vegetation Selection	412
8.3.7.4	Distribution System	412
8.3.7.5	Runoff Collection	412
8.3.8	Construction Considerations	412
8.3.9	Operation and Maintenance	412
8.4	Soil Aquifer Treatment Systems	413
8.4.1	Design Objectives	413
8.4.2	Site Selection	413
8.4.3	Treatment Performance	413
8.4.3.1	BOD and TSS Removal	413
8.4.3.2	Nitrogen Removal	413
8.4.3.3	Phosphorus Removal	415
8.4.3.4	Heavy Metal Removal	415
8.4.3.5	Trace Organics	415

8.4.3.6	Endocrine Disruptors	419
8.4.3.7	Pathogens	420
8.4.4	Preapplication Treatment	420
8.4.5	Design Procedure	420
8.4.6	Design Considerations	421
8.4.6.1	Hydraulic Loading Rates	422
8.4.6.2	Nitrogen Loading Rates	422
8.4.6.3	Organic Loading Rates	423
8.4.6.4	Land Requirements	423
8.4.6.5	Hydraulic Loading Cycle	423
8.4.6.6	Infiltration System Design	424
8.4.6.7	Groundwater Mounding	424
8.4.7	Construction Considerations	425
8.4.8	Operation and Maintenance	426
8.4.8.1	Cold Climate Operation	426
8.4.8.2	System Management	425
8.5	Phytoremediation	425
8.6	Industrial Wastewater Management	427
8.6.1	Organic Loading Rates and Oxygen Balance	427
8.6.2	Total Acidity Loading	429
8.6.3	Salinity	430
References		431

Chapter 9 Sludge Management and Treatment 437

9.1	Sludge Quantity and Characteristics	437
9.1.1	Sludges from Natural Treatment Systems	440
9.1.2	Sludges from Drinking-Water Treatment	441
9.2	Stabilization and Dewatering	442
9.2.1	Methods for Pathogen Reduction	442
9.3	Sludge Freezing	443
9.3.1	Effects of Freezing	443
9.3.2	Process Requirements	443
9.3.2.1	General Equation	444
9.3.2.2	Design Sludge Depth	445
9.3.3	Design Procedures	445
9.3.3.1	Calculation Methods	446
9.3.3.2	Effect of Thawing	446
9.3.3.3	Preliminary Designs	446
9.3.3.4	Design Limits	446
9.3.3.5	Thaw Period	448
9.3.4	Sludge Freezing Facilities and Procedures	448
9.3.4.1	Effect of Snow	449
9.3.4.2	Combined Systems	449
9.3.4.3	Sludge Removal	449
9.3.4.4	Sludge Quality	450

9.4	Reed Beds	450
9.4.1	Function of Vegetation	451
9.4.2	Design Requirements	452
9.4.3	Performance.....	453
9.4.4	Benefits	454
9.4.5	Sludge Quality.....	455
9.5	Vermistabilization	456
9.5.1	Worm Species.....	456
9.5.2	Loading Criteria	456
9.5.3	Procedures and Performance.....	457
9.5.4	Sludge Quality.....	458
9.6	Comparison of Bed-Type Operations.....	458
9.7	Composting	459
9.8	Land Application and Surface Disposal of Biosolids.....	464
9.8.1	Concept and Site Selection	470
9.8.2	Process Design, Land Application.....	471
9.8.2.1	Metals	473
9.8.2.2	Phosphorus	475
9.8.2.3	Nitrogen.....	476
9.8.2.4	Calculation of Land Area.....	478
9.8.3	Design of Surface Disposal Systems.....	482
9.8.3.1	Design Approach.....	482
9.8.3.2	Data Requirements.....	483
9.8.3.3	Half-Life Determination	483
9.8.3.4	Loading Nomenclature.....	486
9.8.3.5	Site Details for Surface Disposal Systems.....	487
	References.....	488

Chapter 10 On-Site Wastewater Systems493

10.1	Types of On-Site Systems	493
10.2	Effluent Disposal and Reuse Options.....	494
10.3	Site Evaluation and Assessment	494
10.3.1	Preliminary Site Evaluation	497
10.3.2	Applicable Regulations	497
10.3.3	Detailed Site Assessment.....	498
10.3.4	Hydraulic Assimilative Capacity	499
10.4	Cumulative Areal Nitrogen Loadings.....	499
10.4.1	Nitrogen Loading from Conventional Effluent Leachfields.....	499
10.4.2	Cumulative Nitrogen Loadings	500
10.5	Alternative Nutrient Removal Processes.....	501
10.5.1	Nitrogen Removal	501
10.5.1.1	Intermittent Sand Filters	501
10.5.1.2	Recirculating Gravel Filters.....	502
10.5.1.3	Septic Tank with Attached Growth Reactor.....	505

10.5.1.4	RSF2 Systems	507
10.5.1.5	Other Nitrogen Removal Methods	509
10.5.2	Phosphorus Removal	511
10.6	Disposal of Various Treated Effluents in Soils	511
10.7	Design Criteria for On-Site Disposal Alternatives	512
10.7.1	Gravity Leachfields	512
10.7.2	Shallow Gravity Distribution	513
10.7.3	Pressure-Dosed Distribution	515
10.7.4	Imported Fill Systems	516
10.7.5	At-Grade Systems	516
10.7.6	Mound Systems	516
10.7.7	Artificially Drained Systems	517
10.7.8	Constructed Wetlands	517
10.7.9	Evapotranspiration Systems	518
10.8	Design Criteria for On-Site Reuse Alternatives	519
10.8.1	Drip Irrigation	519
10.8.2	Spray Irrigation	521
10.8.3	Graywater Systems	521
10.9	Correction of Failed Systems	521
10.9.1	Use of Effluent Screens	521
10.9.2	Use of Hydrogen Peroxide	522
10.9.3	Use of Upgraded Pretreatment	522
10.9.4	Retrofitting Failed Systems	522
10.9.5	Long-Term Effects of Sodium on Clay Soils	522
